

Intro to Git and Github

Hyper Island - FED27

GitHub 2

Publishing on GitHub Pages

- Publishing your code is called *deploying*
- A great way to get started is with GitHub Pages
- Every GitHub account comes with its own web page at `<username>.github.io`
- To publish your web page at that url, the Git Repository on Github must be named exactly the same
- Other repositories can also be published, but will be at `<username>.github.io/<repository-name>`
- Can be turned on in the repository settings

GitHub 2

Connecting existing code to a GitHub repository

- If you have a Git repository locally (if you've run `git init` on your computer)
- 2 ways
 - Cloning a repository and adding code locally
 - Creating an empty repository and point a local repository to that
